Summary

Enterprise AI & Cloud Solutions Architect with 20+ years of experience designing secure, scalable, and business-aligned platforms in complex enterprise environments.

I lead cloud transformation and AI adoption initiatives with a strong focus on governance, security, and operational impact. Recently, I delivered a production Retrieval-Augmented Generation (RAG) assistant used by operational teams, addressing key challenges around hallucination risk, enterprise knowledge retrieval, and data protection.

My work sits at the intersection of enterprise architecture, identity systems, and applied AI, enabling safe and effective adoption of LLM-powered solutions.

Core Expertise

- **AI & Data:** Generative AI, RAG, LLM security and governance, vector databases.
 - **Cloud Architecture:** Azure architecture (CAF, WAF), landing zones, hub-and-spoke networking.
 - **Security & Identity:** Identity-aware design, Zero Trust, IAM, access control, data protection.
 - **Leadership:** Enterprise architecture, technical strategy, governance, stakeholder and cross-functional leadership.
-

Professional Experience

Enterprise AI & Cloud Solutions Architect

Candriam
2007 — Present

Lead architecture design for enterprise-scale AI and cloud platforms, partnering with technical experts and business stakeholders to define secure, scalable, and pragmatic solutions.

Key achievements:

- Designed and deployed a production RAG assistant used daily by operational teams, improving access to critical internal knowledge while enforcing identity-based access control.
- Architected secure AI systems aligned with enterprise security principles, including identity propagation, zero-trust patterns, and protected data access.
- Led cloud modernization initiatives across Azure platform services to improve scalability, governance, and operational resilience.
- Advised executive stakeholders on AI adoption strategies, balancing business value, security requirements, and platform maturity.

Technologies:

Cloud

Azure (App Service, APIM, Container Apps, Service Bus, Application Gateway, Fabric, Data Factory), DevOps

AI

Azure AI Search, Microsoft Foundry, LLM orchestration, RAG architectures, Document Intelligence

Developer

Vistali, Independent Consultant

2004 — 2007

.NET Developer and BizTalk Engineer (ESB)

Delivered specialized consulting services in enterprise integration and application development, supporting clients on complex distributed systems and middleware architecture projects.

Selected Projects

Identity-Aware RAG Security Architecture

Designed a secure enterprise RAG architecture ensuring identity propagation across the entire retrieval pipeline, from user authentication to document retrieval and answer generation.

Key elements:

- Secure vector search and retrieval workflows
 - Identity-based access control and authorization
 - Protection of enterprise data in AI-enabled environments
 - Alignment with enterprise governance and security requirements
-

Education

Engineering Degree

École Supérieure d'Ingénieurs de Marseille

2003 (formerly École Centrale Marseille)
